Special Session: Geometric Analysis

Rio de Janeiro, August 29 - September 02, 2016

Title: Strict convexity condition at infinity and minimal graphs over unbounded domains of Hadamard manifolds

Author: Miriam Telichevesky

Abstract: In this talk I will define the *strict convexity condition at infinity* of a Hadamard manifold M and then describe how it may be useful to investigate the existence of minimal graphs over unbounded domains in M . Some other applications of this condition will also be presented.
