

First Joint Meeting Brazil Italy of Mathematics

Special Session: Mathematical Logic

Rio de Janeiro, August 29 - September 02, 2016

Title: Some Model Theory of Automorphic Forms

Authors: Ricardo Bianconi (Universidade de São Paulo, Brazil)

Abstract: We prove definability and model completeness results about automorphic forms on adelic rings and also on the real and complex fields. We base our work on results of Derakhshan, Macintyre, Peterzil, and Starchenko.
