Rio de Janeiro, August 29 - September 02, 2016

Title: Stochastic modelling of the use of bioreactors for wastewater treatment

Authors: Joaquín Fontbona, Héctor Ramírez, Víctor Riquelme and Francisco J. Silva.

Abstract: In this work in progress we propose and study a stochastic model of a sequential batch reactor from the microscopic scale to the macroscopic scale. We study the existence of solutions of the model as well as some properties. We study the problem of extinction of biomass and the implications for optimal control problems associated to the model.
