Title: On the α -Navier-Stokes-Vlasov Equations

Authors: Gabriela Planas and Cristyan C. V. Pinheiro (Unicamp - Brazil)

Abstract: We consider the α -Navier-Stokes equations coupled with a Vlasov type equation to model the flow of an incompressible fluid containing small particles. We prove the global existence of weak solutions to the coupled system subject to periodic boundary conditions. The convergence of its solutions to that of the Navier-Stokes-Vlasov equations when α tends to zero is also established.
